

## Genwork Expanded Metal Mesh Raised Mesh

Expanded metal mesh has a diverse range of properties, which makes it extremely versatile for many uses and applications.

The mesh is formed from a single piece of metal, which means that there is nothing to work loose, no fretting strands or strained joints or welds.

### Cutting Service

In addition to stock panels we also offer a complete and comprehensive cut to size service, if you wish to have your panels cut to size or framed please follow the links below or download planners.

'U' Edging Section  
Fabrication

Coatings – Self Colour, Galvanised, Bright Zinc plate and Powder Coated.

If you need any help or advice please contact us.

Raised expanded metal is produced by slitting and drawing into an open mesh pattern in a single operation. The resulting expanded metal mesh is stronger and lighter than the original metal sheet.

Raised expanded metal is measured from the centre of the knuckle to the centre of the next, with the Long way measurement normally expressed first.

There are a large number of Raised meshes that are available, as listed below.

### Volume Discounts

Quantities over +10 Panels = price on request

If there are any other forms of Raised mesh that you are looking for and not listed below, please don't hesitate to contact us
