

Genwork Fencing Pedestrian Guard Rail

Pedestrian Guard Rail

Genworks high visibility pedestrian guardrails are designed to maximise panel visibility over the widest possible range of viewing angles.

The high visibility guardrail range incorporates 3 variations of staggered infill bar for maximum transparency. The panel and post construction offers simple site assembly with the minimum number of component parts to retain flexibility of site lay-out.

Panels are supplied with or without a vision gap as required

Standard product is supplied in panel sizes 2.0m wide x 1.0m high panels with RHS posts and rails and round staggered solid bar infill. Posts are available for installation on base plates or extended length posts for concrete foundations. Panels of non-standard lengths, gradients and radii together with matching gates and removable panels are available as made to order.
